

PayMySport Compliance Statement

SportingPulse's PayMySport uses PayPal's Website Payment Standard to handle all credit card information.

SportingPulse uses PayPal's payment processing gateway to process the transaction. The related information, such as credit card details, are entered into the PayPal system. This means there is no handling of credit card details by the SportingPulse system and ensures that PayMySport transactions are secure, and meet PCI DSS compliance.

Payment Card Industry Data Security Standards (PCI DSS) are network security and business practice guidelines adopted by Visa, MasterCard, American Express, Discover Card, and JCB to establish a "minimum security standard" to protect customer's payment card information. It's a requirement for all merchants that store, transmit, or process payment card information.

Merchants and service providers are required to comply with the PCI standards of credit card schemes. When processing credit card transactions through a merchant account, it is necessary to meet PCI validation requirements, including quarterly and annual audits, security self-assessments, and security scans. Exact validation requirements are determined by the volume of credit card transactions. In the case of SportingPulse, these requirements are met through their relationship with PayPal.

PayPal adheres to international PCI compliance standards for data security. PayPal's PCI Compliance can be validated at <http://usa.visa.com/download/merchants/cisp-list-of-pcidss-compliant-service-providers.pdf>. This validation includes the Asia Pacific region, as well as North America, and was assessed by IBM Internet Security Systems.

By using PayMySport, you are able to provide an online payment service to your teams, clubs, associations, leagues, affiliates and governing bodies, with the safety and security of a globally recognised, PCI DSS compliant solution.
